

DUST ELIMINATOR *Dust Control for Gravel Surfaces*

Why the DUST ELIMINATOR? Because it will control your fugitive dust problems, help stabilize road surfaces, reduce maintenance, and help everyone breathe a little easier.

Whether you have a lake-side property, acreage, industrial lot, parking lot or feed lot, dust can be troublesome and costly.

When applied to unpaved roads, magnesium chloride keeps road surfaces damp enough to stay dust free, even under severe temperature and low relative humidity conditions. This product is environmentally safe because it is derived naturally through solar evaporation of sea water.

When used as directed, DUST ELIMINATOR is unlikely to have any significant effect on plant growth or water quality. Properly shaped roads will help keep the DUST ELIMINATOR where you need it.

DUST ELIMINATOR helps stabilize road surfaces and cuts down on expensive maintenance such as frequent blading and gravelling. If a surface is in poor condition, blading and compaction may be required to obtain optimum results. We can also provide these services to you if required.

In tests performed by the U.S. Army Corps of Engineers on asphalt airstrips and tank trails, magnesium chloride was proven to be "the most economically known product for controlling dust from tracked vehicles on cushionless (sand and gravel) soils." The Army tests also show that during the months after the application, there was a 70% reduction in blading and gravelling.

Dust can obscure the vision of drivers, penetrate nearby homes, and cover crops and vegetation, stunting their growth due to the shading effect and the clogging of plant pores. Dust is a common cause of allergies and hay fever. The absence of dust clouds could result in less wear and maintenance on engines and electronic equipment.

We have the right equipment to apply DUST ELIMINATOR to large or small areas in town or out of town. Being able to take care of your dust control needs is not a problem as we have storage for 80,000 gallons of solution.

Give us a call, sit back and relax, and enjoy the outdoors again.
